Various Crops that can Utilize Nitrogen Fixing Biofertilizers

1. Soybeans
2. Peanuts
3. Chickpeas
4. Beans (Common beans, Kidney beans, etc.)
5. Lentils
6. Peas
7. Alfalfa
8. Clover
9. Cowpeas
10. Pigeon peas
11. Mung beans
12. Faba beans
13. Lupins
14. Vetch
15. Groundnuts
16. Rice
17. Wheat
18. Maize (Corn)
19. Barley
20. Sorghum
21. Millet
22. Rye
23. Oats
24. Sugarcane
25. Cotton
26. Sunflower
27. Canola (Rapeseed)
28. Safflower
29. Sesame
30. Mustard

Various Stages of Crop for Application

These biofertilizers can be applied during the seed treatment stage, at the time of sowing, or during early growth stages to ensure optimal nitrogen fixation and availability.

Advantages

Utilizing Nitrogen Fixing Biofertilizers offers several advantages, including reduced dependence on chemical fertilizers, improved soil fertility, enhanced crop yield, and promotion of sustainable agriculture practices.

Storage / Shelf Lifting

NTHRYS Nitrogen Fixing Biofertilizers should be stored in a cool, dry place away from direct sunlight. They have a shelf life of 12 to 18 months when stored under proper conditions.

Application Process

For legumes, apply 5-10 kg per hectare during seed treatment or directly to the soil. For cereals, apply 7-12 kg per hectare depending on soil fertility and crop requirements. Ensure even distribution for best results.
