

Potassium Solubilizing Biofertilizers by NTHRYS

[All Products](#) [Agriculture Products](#) [Back to Biofertilizers](#)

Various Crops that can Utilize Potassium Solubilizing Biofertilizers

1. Rice
2. Wheat
3. Maize (Corn)
4. Sorghum
5. Barley
6. Millet
7. Oats
8. Cotton
9. Sugarcane
10. Sunflower
11. Potatoes
12. Tomatoes
13. Onions
14. Garlic
15. Carrots
16. Cabbage
17. Cauliflower
18. Spinach
19. Brinjal (Eggplant)
20. Soybeans
21. Peas
22. Chickpeas
23. Beans (Common beans, Kidney beans, etc.)
24. Groundnuts (Peanuts)
25. Mustard
26. Safflower
27. Canola (Rapeseed)
28. Sesame
29. Bananas
30. Oranges

Various Stages of Crop for Application

Potassium Solubilizing Biofertilizers can be applied during seed treatment, soil application, or as a foliar spray during key growth stages like flowering and fruiting to improve potassium uptake.

Advantages

These biofertilizers solubilize fixed potassium in the soil, making it available to plants, thereby improving water retention, enzyme activation, and resistance to disease and stress, leading to healthier and more resilient crops.

Storage / Shelf Lining

NTHRYS Potassium Solubilizing Biofertilizers should be stored in a cool, dry place, away from direct sunlight. When stored correctly, they have a shelf life of 12 to 18 months.

Application Process

For soil application, use 5-10 kg per hectare. For foliar application, dissolve 2-5 kg in water and apply during the crop's critical growth stages. Ensure even distribution for optimal results.
