

## Stress-tolerant Biofertilizers by NTHRYS

[All Products](#) [Agriculture Products](#) [Back to Biofertilizers](#)

### Various Crops that can Utilize Stress-tolerant Biofertilizers

1. Wheat
2. Rice
3. Maize (Corn)
4. Sorghum
5. Barley
6. Millet
7. Sugarcane
8. Cotton
9. Sunflower
10. Mustard
11. Canola (Rapeseed)
12. Safflower
13. Groundnuts (Peanuts)
14. Chickpeas
15. Peas
16. Beans (Common beans, Kidney beans, etc.)
17. Lentils
18. Potatoes
19. Tomatoes
20. Onions
21. Garlic
22. Carrots
23. Cabbage
24. Cauliflower
25. Spinach
26. Brinjal (Eggplant)
27. Oranges
28. Bananas
29. Grapes
30. Pineapple
31. Strawberries

### Various Stages of Crop for Application

Stress-tolerant Biofertilizers are particularly effective when applied during the early growth

stages, especially in regions prone to drought, salinity, or other environmental stresses.

### **Advantages**

These biofertilizers enhance the resilience of crops to environmental stresses such as drought, salinity, and extreme temperatures. They promote healthier growth, increase yield, and improve overall plant survival in challenging conditions.

### **Storage / Shelf Lifting**

NTHRYS Stress-tolerant Biofertilizers should be stored in a cool, dry place away from direct sunlight. They have a shelf life of 12 to 18 months when stored under proper conditions.

### **Application Process**

For soil application, use 5-10 kg per hectare during soil preparation. For seed treatment, apply 1-2 kg per 100 kg of seeds. For foliar application, dissolve 2-5 kg in water and apply during key growth stages. Ensure even distribution for optimal results.
