

Microbial Strains

Microbial Strains

NTHRYS offers an extensive collection of microbial strains for research, industrial, and agricultural applications. Our microbial strains include bacteria, fungi, and yeast, each carefully selected and characterized for their unique properties and potential applications. We provide strains for use in bioremediation, fermentation, biofertilizers, and pharmaceuticals, among other fields. NTHRYS ensures that our microbial strains are maintained under optimal conditions and are available in pure, high-quality formats. We also offer custom strain development and optimization services to meet the specific needs of our clients. Our team of microbiologists and biotechnologists works closely with clients to select the most appropriate strains for their projects and to develop protocols for their use. By partnering with NTHRYS, organizations can access a diverse range of microbial strains and expertise, supporting innovation and progress in microbiological research and industry.
