

Comprehensive Neurodegeneration Research Services

Expert Support in Neurodegeneration Research

Explore the mechanisms of neurodegenerative diseases with our research support. We provide insights into the cellular and molecular processes that lead to neuronal decline and death, aiding in the development of interventions to slow or reverse these conditions.

Assistance and Outsourcing

1. **Molecular Pathways of Neurodegeneration:** Studying the biochemical pathways that lead to neuronal damage and death.
2. **Protein Aggregation:** Investigating the accumulation of proteins like amyloid-beta in Alzheimer's and alpha-synuclein in Parkinson's disease.
3. **Genetic Factors:** Analyzing the genetic mutations that contribute to the risk and progression of neurodegenerative diseases.
4. **Neuroinflammation:** Examining the role of the immune system in neurodegeneration, particularly how chronic inflammation affects neurons.
5. **Biomarkers for Early Detection:** Identifying biomarkers that can predict the onset and progression of neurodegenerative diseases.
6. **Therapeutic Strategies:** Developing and testing new treatments that aim to protect neuronal health or restore function.
