Assistance and Outsourcing

1. **Toxicity Testing:** Conducting in vitro and in vivo tests to determine the toxic characteristics of substances.
2. **Risk Assessment:** Quantitative and qualitative evaluations to assess the potential hazards of chemicals to humans and the environment.
3. **Environmental Toxicology:** Studying the impact of chemical exposures on environmental health, including wildlife and ecosystems.
4. **Regulatory Toxicology:** Ensuring compliance with local, national, and international regulations regarding chemical safety.
5. **Pharmacological Toxicology:** Assessing the side effects of drugs as part of the safety evaluation during the drug development process.
