

Nthrys Biobank

NTHRYS Biobank

The NTHRYS Biobank is a state-of-the-art facility dedicated to the collection, storage, and management of biological samples for research and clinical purposes. Our biobank services include the secure storage of DNA, RNA, blood, tissue, and other biological materials under optimal conditions to ensure their integrity and longevity. We provide comprehensive biobanking services that support a wide range of research areas, including genomics, proteomics, personalized medicine, and drug discovery. NTHRYS is committed to maintaining the highest standards of quality and compliance, adhering to ethical guidelines and regulatory requirements. Our biobank is equipped with advanced technology for sample tracking, quality control, and data management, ensuring that researchers have reliable access to high-quality samples. By partnering with NTHRYS, researchers and institutions can leverage our biobank services to accelerate their research and achieve breakthroughs in science and medicine.
